SUBJECT INDEX

ATRAN terrain sensing guidance—the grand-daddy system, 2
Acquisition, evaluation of image processing for man-in-loop target, 119
Acquisition sensors, digital filters for infrared target, 78
Acquisition terminal homing, evaluation of scene-matching concepts for autonomous, 210
Active 10.6 m image processing, 103
Adaptive learning networks and image processing for missile guidance, 293
Adaptive learning networks, optical methods to provide feature inputs for, 303
Adaptive learning networks, target recognition for missile guidance using, 309
Aerospace Center, digital sensor simulation at the Defense Mapping Agency, 392
Aid, terrain contour matching (TERCOM): a cruise missile guidance, 10
Algorithm to terminal homing, application of an iterative feature matching, 243
Almost everything one needs to know about image matching systems, 426
Altitude stand-off photographs, interactive flying spot image scanner for matching high-, 255
Application of exact area registration to scene matching, 166
Application of an iterative feature matching algorithm to terminal homing, 243
Application of relaxation labeling to missile guidance, 239
Applications of video disc technology to missile guidance, potential, 194
Area correlator (DSMAC), digital scene matching, 36
Area registration to scene matching, application of exact, 166
Automatic target cuer system, forward looking infrared (FLIR) image enhancement for the, 91
Autonomous acquisition terminal homing evaluation of scene-matching concepts for, 210
Autonomous scene matching, three-dimensional, 138

(BOSSCO), Boeing shaped scan correlator, 19
Based scene matching, match quality estimation for feature-, 217
Bayes risk image correlation, minimum, 200
Best shapes for edge correlation, a criterion for, 454
Binomial window, the, 467
Boeing shaped scan correlator (BOSSCO), 19
Broad band visible data, material identification using, 370

Camera model, some properties of a general, 273
Classification using texture analysis, terrain, 358
Constraints in stereo vision, geometric, 281
Contour matching (TERCOM): a cruise missile guidance aid, terrain, 10
Contrast reversals, correlation of images with random, 156
Correlation, a criterion for best shapes for edge, 454
Correlation, effects of rectification on image, 178
Correlation of images with random contrast reversals, 156
Correlation, minimum Bayes risk image, 200
Correlation missile guidance, USAF development of optical, 28
Correlations of digital images—using figures of merit, the performance evaluations of the, 461
Correlator (BOSSCO), Boeing shaped scan, 19
Correlator (DSMAC), digital scene matching area, 36
Criterion for best shapes for edge correlation, a, 454
Cruise missile guidance aid, terrain contour matching (TERCOM):, a, 10
Cultural scenes for passive infrared sensors, simulation of, 382

(DSMAC), digital scene matching area correlator, 36
Data bases supporting scene generation. geographic, 406
Defense Mapping Agency Aerospace Center, digital sensor simulation at the, 392
Determination, syntactic approach to geometric surface shell, 264
Development of microwave radiometric (MICRAD) terrain-sensing guidance in the Navy, 59
Development of optical correlation missile guidance, USAF, 28
Digital filters for infrared target acquisition sensors, 78
Digital images—using figures of merit, the performance evaluations of the correlations of, 461
Digital scene matching area correlator (DSMAC), 36
Digital sensor simulation at the Defense Mapping Agency Aerospace Center, 392
Digital simulation of reticle-systems, 414
Digital terrain data to model image formation in remote sensing, using, 361
Dimensional autonomous scene matching, three-, 138
Disc technology to missile guidance, potential applications of video, 194
Doppler map matching, pulse, 50

Edge correlation, a criterion for best shapes for, 454
Edge measurements, radar and optical, 458
Effects of rectification on image correlation, 178
Enhancement for the automatic target cuer system, forward looking infrared (FLIR) image, 91
Estimation for feature-based scene matching, match quality, 217

Evaluation of image processing for man-in-loop target acquisition, 119
Evaluation of scene-matching concepts for autonomous acquisition terminal homing, 210
Evaluations of the correlations of digital images—using figures of merit, the performance, 461
Exact area registration to scene matching, application of, 166
Extraction from forward looking infrared (FLIR) imagery, feature, 126

(FLIR) image enhancement for the automatic target cuer system, forward looking infrared, 91
(FLIR) imagery, feature extraction from forward looking infrared, 126
Feature-based scene matching, match quality estimation for, 217
Feature extraction from forward looking infrared (FLIR) imagery, 126
Feature inputs for adaptive learning networks, optical methods to provide, 303
Feature matching algorithm to terminal homing, application of an iterative, 243
Figures of merit, the performance evaluations of the correlations of digital images—using, 461
Filters for infrared target acquisition sensors, digital, 78
Flying spot image scanner for matching high-altitude stand-off photographs, interactive, 255
Formation in remote sensing, using digital terrain data to model image, 361
Forward looking infrared (FLIR) image enhancement for the automatic target cuer system, 91
Forward looking infrared (FLIR) imagery, feature extraction from, 126

General camera model, some properties of a, 273
Generation, geographic data bases supporting scene, 406
Geographic data bases, supporting scene generation, 406
Geological applications of multispectral techniques for lithologic and lineament analysis, 343
Geometric constraints in stereo vision, 281
Geometric surface shell determination, syntactic approach to, 264
Guidance, adaptive learning networks and image processing for missile, 293
Guidance aid, terrain contour matching (TERCOM): a cruise missile, 10
Guidance, application of relaxation labeling to missile, 239
Guidance—the gand-daddy system, ATRAN terrain sensing, 2
Guidance, multisensor image processing integration for missile, 316
Guidance in the Navy, development of microwave radiometric (MICRAD) terrain-sensing, 59
Guidance, potential applications of video disc technology to missile, 194
Guidance, 3-D model matching for missile, 232
Guidance, USAF development of optical correlation missile, 28
Guidance using adaptive learning networks, target recognition for missile, 309

High-altitude stand-off photographs, interactive flying spot image scanner for matching, 255
Homing, application of an iterative feature matching algorithm to terminal, 243
Homing, evaluation of scene-matching conepts for autonomous acquisition terminal, 210

Identification, rapid texture, 376
Identification, use of thermal-inertia properties for material, 350
Identification using broad band visible data, material, 370
Image correlation, effects of rectification on, 178
Image correlation, minimum Bayes risk, 200
Image enhancement for the automatic target cuer system, forward looking infrared (FLIR), 91
Image formation in remote sensing, using digital terrain data to model, 361
Image matching systems, almost everything one needs to know about, 426
Image perspective transformations, 322
Image processing, active 10.6μm, 103
Image processing integration for missile guidance, multisensor, 316
Image processing for man-in-loop target acquisition, evaluation of, 119
Image processing for missile guidance, adaptive learning networks and, 293
Image scanner for matching high-altitude stand-off photographs, interactive flying spot, 255
Image-to-map registration, 184
Imagery, feature extraction from forward looking infrared (FLIR), 126
Images—using figures of merit, the performance evaluations of the correlations of digital, 461
Images with random contrast reversals, correlation of, 156
Inertia properties for material identification, use of thermal-, 350
Infrared (FLIR) image enhancement for the automatic target cuer system, forward looking, 91
Infrared (FLIR) imagery, feature extraction from forward looking, 126
Infrared sensors, simulation of cultural scenes for passive, 382
Infrared target acquisition sensors, digital filters for, 78
Inputs for adaptive learning networks, optical methods to provide feature, 303
Integration for missile guidance, multisensor image processing, 316
Interactive flying spot image scanner for matching high-altitude stand-off photographs, 255
Interphase as an indicator of subsurface activity, remote sensing of the sea/air, 334
Iterative feature matching algorithm to terminal homing, application of an, 243

Labeling to missile guidance, application of relaxation, 239
Learning networks and image processing for missile guidance, adaptive, 293
Learning networks, optical methods to provide feature inputs for adaptive, 303
Learning networks, target recognition for missile guidance using adaptive, 309
Lineament analysis, geological applications of multispectral techniques for lithologic and, 343
Lithologic and lineament analysis, geological applications of multispectral techniques for, 343
Looking infrared (FLIR) image enhancement for the automatic target cuer system, forward, 91
Looking infrared (FLIR) imagery, feature extraction from forward, 126

(MICRAD) terrain-sensing guidance in the Navy, development of microwave radiometric, 59
Man-in-loop target acquisition, evaluation of image processing for, 119
Map matching, pulse doppler, 50
Map-matching techniques for use with multispectral/multitemporal data, 146
Map registration, image-to-, 184
Match quality estimation for feature-based scene matching, 217
Matching algorithm to terminal homing, application of an iterative feature, 243
Matching, application of exact area registration to scene, 166
Matching area correlator (DSMAC), digital scene, 36
Matching concepts for autonomous acquisition terminal homing, evaluation of scene-, 210
Matching for missile guidance, 3-D model, 232
Matching high-altitude stand-off photographs, interactive flying spot image scanner for, 255
Matching, match quality estimation for feature-based scene, 217
Matching, model-based scene, 255
Matching, pulse doppler map, 50
Matching systems, almost everything one needs to know about image, 426
Matching techniques for use with multispectral/multitemporal data, map-, 146
Matching (TERCOM): a cruise missile guidance aid, terrain contour, 10
Matching three-dimensional autonomous scene, 138
Material identification, use of thermal-inertia properties for, 350

Material identification using broad band visible data, 370
Measurements, radar and optical edge, 458
Merit, the performance evaluations of the correlations of digital images—using figures of, 461
Methods to provide feature inputs for adaptive learning networks, optical, 303
Microwave radiometric (MICRAD) terrain-sensing guidance in the Navy, development of, 59
Minimum Bayes risk image correlation, 200
Missile guidance, adaptive learning networks and image processing for, 293
Missile guidance aid, terrain contour matching (TERCOM): a cruise, 10
Missile guidance, application of relaxation labeling to, 239
Missile guidance, multisensor image processing integration for, 316
Missile guidance, potential applications of video disc technology to, 194
Missile guidance, 3-D model matching for, 232
Missile guidance, USAF development of optical correlation, 28
Missile guidance using adaptive learning networks, target recognition for, 309
Model-based scene matching, 225
Model image formation in remote sensing, using digital terrain data to, 361
Model matching for missile guidance, 3-D, 232
Model, some properties of a general camera, 273
Multisensor image processing integration for missile guidance, 316
Multispectral/multitemporal data, map-matching techniques for use with, 146
Multispectral techniques for lithologic and lineament analysis, geological applications of, 343
Multitemporal data, map-matching techniques for use with multispectral/, 146

Networks and image processing for missile guidance, adaptive learning, 293
Networks, optical methods to provide feature inputs for adaptive learning, 303
Networks, target recognition for missile guidance using adaptive learning, 309
Navigation update, radiometric 67
Navy, development of microwave radiometric (MICRAD) terrain-sensing guidance in the, 59

Optical correlation missile guidance, USAF development of, 28
Optical edge measurements, radar and, 458
Optical methods to provide feature inputs for adaptive learning networks, 303

Passive infrared sensors, simulation of cultural scenes for, 382
Performance evaluations of the correlations of digital images—using figures of merit, the, 461
Perspective transformations, image, 322
Photographs, interactive flying spot image scanner for matching high-altitude stand-off, 255
Potential applications of video disc technology to missile guidance, 194
Preparation for radiometric update systems, reference, 400
Processing, active 10.6μm image, 103
Processing for man-in-loop target acquisition, evaluation of image, 119
Processing for missile guidance, adaptive learning networks and image, 293
Processing integration for missile guidance, multisensor image, 316
Properties for material identification, use of thermal-inertia, 350
Properties of a general camera model, some, 273
Pulse doppler map matching, 50

Quality estimation for feature-based scene matching, match, 217

Radar and optical edge measurements, 458
Radiometric (MICRAD) terrain-sensing guidance in the Navy, development of microwave, 59
Radiometric navigation update, 67
Radiometric update systems, reference preparation for, 400
Random contrast reversals, correlation of images, 156
Range only correlation system, the, 42
Rapid texture identification, 376
Recognition for missile guidance using adaptive learning networks, target, 309
Rectification on image correlation, effects of, 178
Reference preparation for radiometric update systems, 400
Registration, image-to-map, 184
Registration to scene matching, application of exact area, 166
Relaxation labeling to missile guidance, application of, 239
Remote sensing of the sea/air interphase as an indicator of subsurface activity, 334
Remote sensing, using digital terrain data to model image formation in, 361
Reticle-systems, digital simulation of, 414
Reversals, correlation of images with random contrast, 156

Scan correlator (BOSSCO), Boeing shaped, 19
Scanner for matching high-altitude stand-off photographs, interactive flying spot image, 255
Scene generation, geographic data bases supporting, 406
Scene matching, application of exact area registration to, 166
Scene matching area correlator (DSMAC), digital, 36
Scene-matching concepts for autonomous acquisition terminal homing, evaluation of, 210
Scene matching, match quality estimation for feature-based, 217
Scene matching, model-based, 225
Scene matching, three-dimensional autonomous, 138
Sea/air interphase as an indicator of subsurface activity, remote sensing of the, 334
Sensing guidance—the grand-daddy system, ATRAN terrain, 2
Sensing guidance in the Navy, development of microwave radiometric (MICRAD) terrain-, 59
Sensing of the sea/air interphase as an indicator of subsurface activity, remote, 334
Sensing, using digital terrain data to model image formation in remote, 361
Sensor simulation at the Defense Mapping Agency Aerospace Center, digital, 392
Sensors, digital filters for infrared target acquisition, 78
Sensors, simulation of cultural scenes for passive infrared, 382
Shaped scan correlator (BOSSCO), Boeing, 19
Shell determination, syntactic approach to geometric surface, 264
Simulation of cultural scenes for passive infrared sensors, 382
Simulation at the Defense Mapping Agency Aerospace Center, digital sensor, 392
Simulation of reticle-systems, digital, 414
Some properties of a general camera model, 273
Stand-off photographs, interactive flying spot image scanner for matching high-altitude, 255
Stereo vision, geometric constraints in, 281
Subsurface activity, remote sensing of the sea/air interphase as an indicator of, 334
Surface shell determination, syntactic approach to geometric, 264
Syntactic approach to geometric surface shell determination, 264

(TERCOM): a cruise missile guidance aid, terrain contour matching, 10
Target acquisition, evaluation of image processing for man-in-loop, 119
Target acquisition sensors, digital filters for infrared, 78
Target cuer system, forward looking infrared (FLIR) image enhancement for the automatic, 91
Target recognition for missile guidance using adaptive learning networks, 309
Techniques for use with multispectral/multitemporal data, map-matching, 146
Technology to missile guidance, potential applications of video disc, 194
10.6μm image processing, active, 103

Terminal homing, application of an iterative feature matching algorithm to, 243
Terminal homing, evaluation of scene-matching concepts for autonomous acquisition, 210
Terrain classification using texture analysis, 358
Terrain contour matching (TERCOM): a cruise missile guidance aid, 10
Terrain data to model image formation in remote sensing, using digital, 361
Terrain sensing guidance—the grand-daddy system, ATRAN, 2
Terrain-sensing guidance in the Navy, development of microwave radiometric (MICRAD), 59
Texture analysis, terrain classification using, 358
Texture identification, rapid, 376
Thermal-inertia properties for material identification, use of, 350
3-D model matching for missile guidance, 232
Three-dimensional autonomous scene matching, 138
Transformations, image perspective, 322

USAF development of optical correlation missile guidance, 28
Update, radiometric navigation, 67
Update systems, reference preparation for radiometric, 400
Use of thermal-inertia properties for material identification, 350
Using digital terrain data to model image formation in remote sensing, 361

Video disc technology to missile guidance, potential applications of, 194
Visible data, material identification using broad band, 370
Vision, geometric constraints in stereo, 281

Window, the binomial, 467
